

Lecture 4II

- fzero
- Multiple roots

Inline Function

```
fstr='x.^2-2*x-4';  
fx=inline(fstr)
```

Function evaluation

```
fstr='x.^2-2*x-4';  
fx=inline(fstr)
```

```
x = -5:1:5;  
y = fx(x)
```

```
y = [ 31  20  11  4  -1  -4  -5  -4  -1  4  11]
```

Plot

```
>> fstr='x.^2-2*x-4';  
>> fx=inline(fstr);  
>> x=linspace(-5,5);  
>> plot(x,fx(x));
```

Find zeros

```
>> fstr = 'x.^2-2*x-4';  
>> v = fzero(fstr,1)
```

```
ans =
```

```
-1.2361
```

```
fx(v)
```

```
ans =
```

```
0
```

fzero

- `fzero(fstr,x0)`
- Input
 - A string that expresses a 1D function
 - Initial guess
- Output
 - A root

Multiple roots

- Find multiple roots of a given function

- Different guesses may lead to different roots

```
>> fstr = 'x.^2-2*x-4';  
>> v = fzero(fstr,1)
```

```
ans =
```

```
-1.2361
```

```
fx(v)
```

```
ans =
```

```
0
```

```
>> v = fzero(fstr,5)
```

```
v =
```

```
3.2361
```

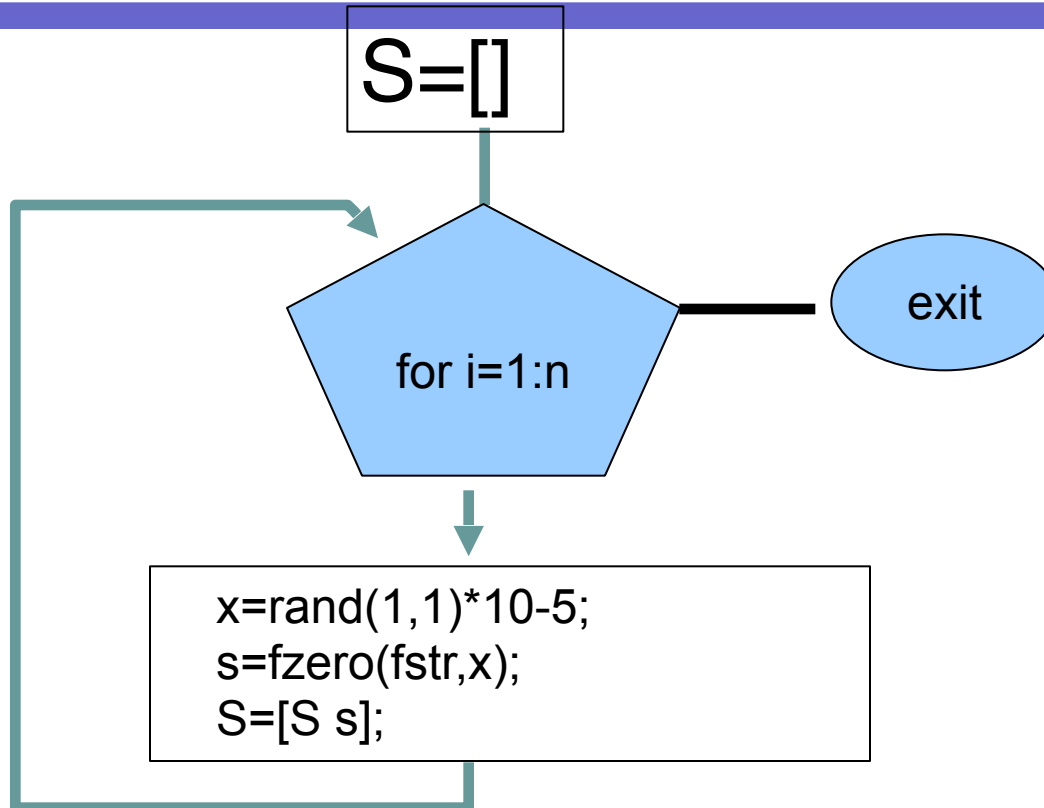

```
fx(v)
```

```
ans =
```

```
0
```

Flow chart I

- Let s be a root and S store distinct roots
- Check

$$\text{sum}(\text{abs}(S-s) < 10^{-6}) == 0$$

1. Absolute differences between s and elements in S
2. Check if any absolute difference is less than a small positive value
3. Exist \rightarrow left hand side greater zero \rightarrow logical value is 0
4. Not exist \rightarrow left hand side equals zero \rightarrow logical value is 1

Case I

$S=[1\ 2\ 3]; s=1$

It is FALSE to say s not in S

$\text{sum}(\text{abs}(S-s) < 10^{-6}) == 0$

ans =

0

1. There exists some element in S close enough to s
2. s belongs S

Case II

$S=[1\ 2\ 3]; s=1+\text{eps}$

It is FALSE to say s not in S

$\text{sum}(\text{abs}(S-s) < 10^{-6}) == 0$

ans =

0

1. There exists some element in S close enough to s
2. s belongs S

Case III

$S=[1\ 2\ 3]; s=1.5$

$\sum(\text{abs}(S-s) < 10^{-6}) == 0$

ans =

1

1. no absolute difference less than 10^{-6}
2. there exists no element in S close enough to s
3. s does not belong S
4. It is TRUE to say s not in S

Case IV

$S=[]; s=1.5$

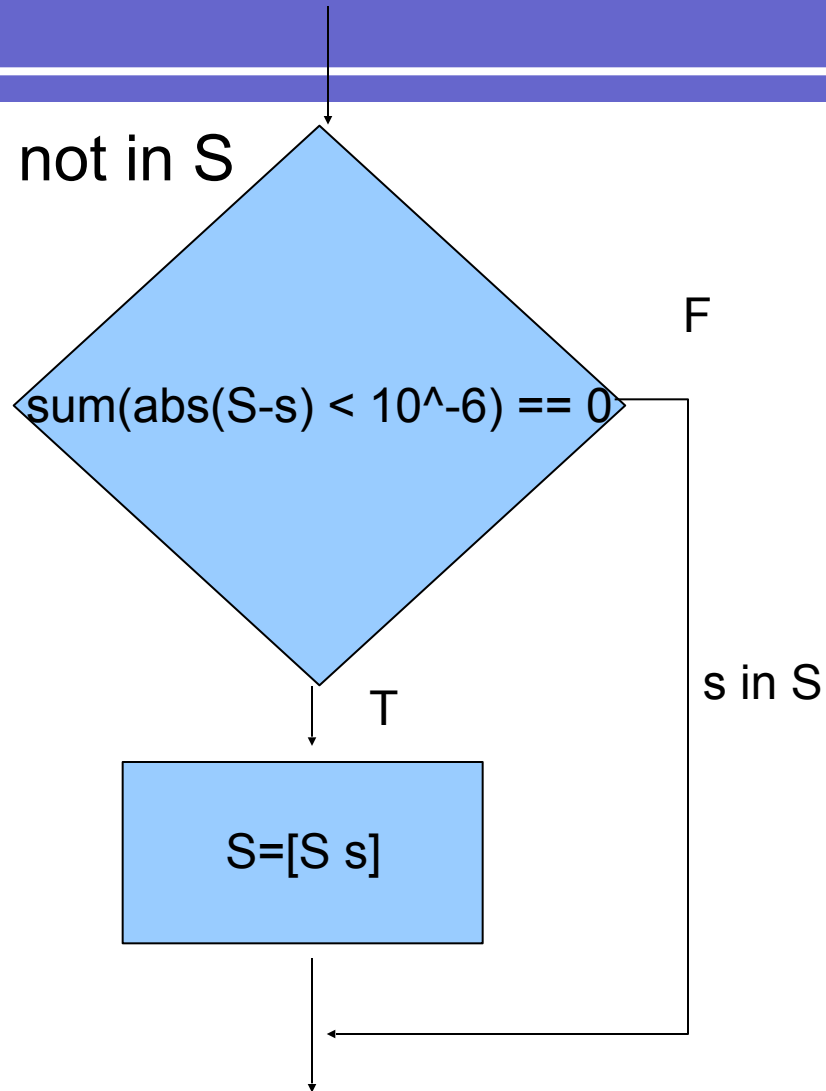

$\text{sum}(\text{abs}(S-s) < 10^{-6}) == 0$

ans =

1

1. no absolute difference less than 10^{-6}
2. there exists no element in S close enough to s
3. s does not belong S
4. It is TRUE to say s not in S

Append s to S if s is not in S

Flow chart

input fstr
S=[]

exit

x=rand(1,1)*10-5;
s=fzero(fstr,x);

Append s to S if s is not in S

Multiple roots

source codes

```
fstr=input('key in a function:','s');
S=[];
ep=10^-6;
for i=1:10
    x=rand(1,1)*8-4;
    s=fzero(fstr,x);
    if sum(abs(S-s) < 10^-6) == 0
        S=[S s];
    end
end
S
fx=inline(fstr);
x=linspace(-5,5);
plot(x,fx(x));hold on;
plot(S,zeros(size(S)),'ro');
```
