Fibonacci Numbers

A	T-1 • I	•	TAT	1
/ I	HIDON	2001	1 1 1	mbers
I	TINOTI	acci	1 1 U	ITITOCIO

4.1 Fibonacci's Exercise	•	(
--------------------------	---	---

- 4.2 Lots of Identities
- 4.3 A Formula for the Fibonacci Numbers .

In the thirteenth century, the Italian mathematician Leonardo Fibonacci studied the following (not too realistic) question:

Leonardo Fibonacci

A farmer raises rabbits. Each rabbit gives birth to one rabbit when it turns 2 months old, and then to one rabbit each month thereafter. Rabbits never die, and we ignore male rabbits. How many rabbits will the farmer have in the nth month if he starts with one newborn rabbit?

Graphs

7.1	Even	and	Oc	dd	Degrees	•	•	•	•	•	•	•	•	•	•
-----	------	-----	----	----	---------	---	---	---	---	---	---	---	---	---	---

- 7.2 Paths, Cycles, and Connectivity....
- 7.3 Eulerian Walks and Hamiltonian Cycles

8 Trees

8.1	How to Define Trees
8.2	How to Grow Trees
8.3	How to Count Trees?
8.4	How to Store Trees
8.5	The Number of Unlabeled Trees

9 Finding the Optimum

- 9.1 Finding the Best Tree
- 9.2 The Traveling Salesman Problem

10 Matchings in Graphs

10.1	A Dancing Problem
10.2	Another matching problem
10.3	The Main Theorem
10.4	How to Find a Perfect Matching

13 Coloring Maps and Graphs

13.1	Coloring Regions with Two Colors
13.2	Coloring Graphs with Two Colors
13.3	Coloring graphs with many colors
13.4	Map Coloring and the Four Color Theorem

Sections 1,2-6

4. Mathematics of Finance

Sections 1-5

4.1 Interest Rates

If you borrow the amount P (called the principal) which must be repaid at time T along with simple interest at rate r per time T, then the amount to be repaid at time T is

$$P + rP = (1+r)P.$$

$$P\lim_{n\to\infty}(1+r/n)^n=Pe^r,$$

where e, the base of the natural logarithm, is defined by

$$e = \lim_{n \to \infty} (1 + 1/n)^n$$

and is approximately given by $e \approx 2.71828 \dots$
